**Program Description**

The Land Surveying Certificate combines 23 credits in the area of mathematics, field skills, land surveying, GIS, AutoCAD, and an internship in the surveying profession.

The certificate does not replace an Associate of Science degree in Land Surveying for employment, but is designed as a sub-credential certificate of the Land Surveying AS. The benefit of the certificate is to enhance an existing degree program and gain additional experience with GIS, GPS and applications of mapping, above and beyond other Associate degrees. Land Surveying students may want additional field experience in combination with their transfer degree, or students who are pursuing a Natural Resources Technology program may want to enhance mathematical and surveying application skills to maximize employment opportunities at the technician level.

**Occupational Titles**

Surveying Aide or Technician, Engineering Technician

**Program Learning Outcomes**

Graduates of this program will:

1. Demonstrate competence in Land Navigation and Public Land Survey systems.
2. Understand and demonstrate the use of basic terminology, principles, equipment, and skills required for land measurements.
3. Utilize the basic functions of digital tools for data collection, analysis and presentation (GPS/GIS/PowerPoint/Excel/graph functions).
4. Demonstrate awareness of historical, political, economic, and social factors which may affect the Surveying profession.
5. Develop the quantitative mathematical skills necessary to measure, monitor, analyze and manage all aspects of natural resources.
